

The analysis reveals several important trends, patterns, and business insights within the dataset

- Most products are priced within the range of **20 to 40**, indicating that the majority of items fall into a moderate price category.
- In terms of sales performance, the highest number of products recorded sales between **800 and 1000 units**, suggesting a consistent level of demand across the dataset.
- Regarding promotion, although the majority of products are **not under promotion**, products that are promoted achieve significantly **higher average sales volume**. This indicates that promotional strategies have a strong positive impact on sales performance.
- Additionally, the dataset shows that **female products dominate over male products**, both in quantity and performance. Female products consistently achieve higher sales compared to male products across all seasons.
- From a seasonal perspective, **autumn contains the highest number of products**, followed by winter, spring, and summer. However, when analyzing sales performance, both genders show a similar seasonal trend.
- For both male and female products, **winter records the highest sales**, followed by summer, then spring, and finally autumn.
- Overall, the analysis highlights that pricing, promotion, gender targeting, and seasonality all play significant roles in influencing product performance and sales outcomes.
